Business Creation Engine

A complete system from problem selection and first sale to cash control, operations and responsible scaling.

MATRIX REPROGRAMMED - DETAILED WEALTH GUIDE

Reader outcome: Produce a 90-day launch plan with customer evidence, unit economics, legal checks and cash runway.
Best for: A founder, sole trader or small team testing a new business or rebuilding an unprofitable one.
Edition checked: 2026-07-21

CONTENTS

1. Problem before product

Describe the customer, problem, current workaround, economic cost and urgency.
Interview potential buyers without leading them toward your proposed solution.
Ask for examples of recent behaviour and spending, not hypothetical interest.
A painful problem without budget or decision authority may not support a business.

2. Problem interview script

When did this problem last occur?
What did you do?
What did it cost in money, time, risk or lost revenue?
Who decides whether to fix it?
What alternatives have been tried?
What evidence would justify switching?
Would the buyer commit to a paid pilot, deposit, letter of intent or introduction?

3. Offer design

Specify result, scope, exclusions, delivery time, evidence of completion and price.
Reduce buyer risk with a small paid pilot rather than unsupported guarantees.
Choose one customer segment and one core offer until the sales process is understood.
Avoid custom promises that destroy delivery repeatability.

4. Unit economics

Contribution per sale = price minus variable costs directly caused by the sale.
Break-even volume = fixed costs divided by contribution per sale.
Include refunds, rework, card fees, commissions, bad debt and owner labour.
Track gross margin, contribution margin and cash collection separately.
A high-margin sale can still be unprofitable after customer acquisition and support.

5. Customer acquisition

Choose channels where the target buyer already searches, gathers or buys.
Start with direct conversations and partnerships to learn language and objections.
Measure cost per qualified conversation, proposal, customer and cash collected.
Do not scale paid advertising before conversion and delivery economics are proven.

6. Cash runway and working capital

Runway = available operating cash divided by conservative monthly net cash outflow.
Model deposit timing, supplier terms, inventory, VAT, payroll and customer payment delay.
Separate tax and customer deposits from available operating profit.
Maintain a downside case with lower sales and slower collection.
Growth can consume cash faster than a stable small business.

7. Legal and compliance foundation

Choose legal form based on liability, partners, tax, social contributions, financing and administration.
Complete required registration through official channels.
Use written terms, invoices, privacy notices and sector licences where required.
Review insurance, health and safety, consumer rights, employment law and data protection.
Do not copy internet contracts without checking jurisdiction and actual business process.

8. Operations and quality

Document the order-to-cash process.
Define acceptance criteria and defect handling.
Maintain supplier alternatives and critical inventory rules.
Track lead time, on-time delivery, defects, refunds and customer concentration.
Create backups, access controls and incident procedures for essential data and systems.

9. Hiring and delegation

Hire only after the role, workload, output and cash support are clear.
Distinguish employee, contractor and supplier under applicable law.
Delegate outcomes with documented authority and controls.
Protect payroll and tax obligations before owner distributions.
Avoid solving weak demand by adding people.

10. Responsible scaling

Scale one proven constraint at a time.
Use experiments with a budget, owner, target, deadline and stop rule.
Monitor quality and cash as volume increases.
Diversify customers and suppliers before concentration becomes existential.
Do not expand premises, inventory or debt because revenue alone is growing.

11. 90-day build

Days 1-14: 20 problem interviews, written offer, legal screen and unit-economics model.
Days 15-30: sell and deliver paid pilots; reconcile actual time and cost.
Days 31-60: standardise delivery, pricing and collection; remove unprofitable scope.
Days 61-90: create repeat sales, referral channels and a conservative scaling decision.

[ ] First customer evidence.

[ ] Break-even volume.

[ ] Runway.

[ ] Primary risk.

11. 90-day build (continued)

[ ] Next experiment.

12. How to use this guide

Purpose: Produce a 90-day launch plan with customer evidence, unit economics, legal checks and cash runway.
Best reader: A founder, sole trader or small team testing a new business or rebuilding an unprofitable one.
Read the guide once without taking action. On the second pass, complete the checklists and write down the evidence supporting each decision.
Replace every example number with your own verified amount, date, fee, tax treatment, contract term or source document.
Do not treat a checklist tick as proof. Keep copies of the underlying statements, quotations, filings, contracts and calculations.
For major decisions, use this guide to prepare better questions for a regulated adviser, accountant, lawyer, lender or insurer.

13. Evidence standard

Tier 1: law, regulator, tax authority, court, audited accounts, official product document or signed contract.
Tier 2: recognised institutional research that states its methodology, date and limitations.
Tier 3: reputable reporting used to identify questions, not to replace primary evidence.
Tier 4: marketing, social posts, testimonials, screenshots and anonymous claims. Treat these as unverified leads.
Write the source date beside every changing figure. A correct figure without a date can become misleading.
Separate facts, estimates, assumptions and scenarios. Never allow a scenario to be presented as a forecast or guarantee.
A company, fund, adviser, trust, structure, transaction or association is not proof of misconduct.

14. Decision record worksheet

[ ] State the decision in one sentence.
[ ] State the desired result and deadline.
[ ] List the three strongest pieces of supporting evidence.
[ ] List the three strongest reasons the decision may fail.
[ ] Record the maximum acceptable loss of money, time and flexibility.
[ ] Record the smallest reversible test.
[ ] Name the person responsible for checking legal, tax or regulatory consequences.
[ ] Set the next review date and the evidence that would cause you to stop.

15. Professional advice triggers

Seek regulated investment advice when product suitability, risk capacity, pensions, insurance or a large portfolio decision is unclear.

Seek tax advice before changing residence, extracting company cash, transferring assets, using trusts, gifting substantial sums or entering cross-border arrangements.

Seek legal advice before signing guarantees, shareholder agreements, acquisition contracts, complex leases, loan security or beneficiary arrangements.

Seek accounting advice when turnover, VAT, payroll, inventory, multiple activities or company-group transactions become material.

Use a defined written question. Paying for broad reassurance without documents or calculations rarely produces a useful answer.

16. Subject focus map

Use the following subject anchors as named checkpoints. For each checkpoint, record the fact, source, date, assumption, decision and next review date.

PROBLEM INTERVIEW: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

UNIT ECONOMICS: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

CASH RUNWAY: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

90-DAY BUILD: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

Do not mark a checkpoint complete because an action was taken. Mark it complete only when the result and supporting evidence have been recorded.

Where a checkpoint depends on another person, institution, platform or contract, record that dependency and a fallback route.

Rank checkpoints by potential harm if ignored, not by how interesting or easy they appear.

At the end of each review, choose one checkpoint to advance and one risk to reduce before adding a new objective.

17. Worked decision case

Write a real decision from your own situation at the top of a blank page. Examples include changing work, launching an offer, choosing an account, buying an asset, restructuring a business or rejecting a proposal.

Baseline: state the current cash, income, liabilities, commitments, ownership, legal position and time available. Use documents rather than memory where possible.

Desired result: describe the measurable outcome, deadline and reason. Remove vague language such as more, better, passive, safe or guaranteed.

Options: include the proposed action, a smaller reversible test, a diversified alternative, delaying the action and doing nothing.

Evidence: attach at least three independent sources. Identify which evidence is

17. Worked decision case (continued)

official, contractual, audited, estimated, promotional or missing.
Economics: show setup cost, recurring cost, cash timing, fees, tax reserve, downside loss, opportunity cost and the point at which the decision becomes worthwhile.
Risk: identify concentration, liquidity, legal, operational, fraud, health, relationship and behavioural risks. Name the risk that could create irreversible harm.
Professional review: write the exact question that requires an accountant, lawyer, regulated adviser, lender, insurer or technical specialist.
Decision: state proceed, test, delay or reject. Record the maximum commitment and the evidence required before any further commitment.
Review: set a dated checkpoint. Write the result that would confirm the decision, the result that would require adjustment and the result that would trigger an immediate stop.

18. 90-day implementation workbook

Week 1 - Establish the baseline. Reconcile the relevant accounts, contracts, statements, fees, tax records, responsibilities and deadlines.
Week 2 - Define the result. Choose one measurable outcome and remove actions that do not directly support it or protect an essential risk.
Week 3 - Gather primary evidence. Use official registers, filings, signed terms, current quotations and dated institutional data.
Week 4 - Compare alternatives. Include a lower-cost option, a lower-risk option, a reversible test and the option to wait.
Week 5 - Model the economics. Build downside, base and upside cases while treating every uncertain input as an assumption.
Week 6 - Verify identity and authority. Confirm who owns, controls, advises, holds money, signs contracts and bears liability.
Week 7 - Run the smallest useful test. Limit money, time and legal commitment while collecting evidence about real demand or performance.
Week 8 - Reconcile actual results. Compare promised, expected and actual cost, time, cash flow, quality, risk and customer or counterparty behaviour.
Week 9 - Repair the constraint. Improve the single factor currently limiting income, retention, safety, liquidity, delivery or evidence quality.
Week 10 - Install controls. Add calendar reminders, approval limits, account separation, written procedures, backups and review ownership.
Week 11 - Decide whether to scale. Increase commitment only when the test produced measurable value and the downside remains affordable.
Week 12 - Complete the evidence file. Store the decision record, sources, calculations, contracts, results, lessons and next review date.
Day 90 - Write a one-page conclusion: what was established, what remains uncertain, what changed, what will continue and what will stop.

19. Review, escalation and stop rules

Review monthly when the decision affects recurring cash, debt, customer commitments, investment contributions or essential protection.
Review immediately after a material legal change, tax notice, contract change, security incident, missed payment, large loss, health event or relationship change.
Escalate to a qualified professional when the facts cross jurisdictions, involve regulated products, create personal guarantees, affect beneficiaries or cannot be reversed cheaply.
Pause when required documents are missing, identities cannot be independently verified, costs are unclear or the counterparty resists reasonable due diligence.
Stop when the action requires deception, undeclared income, false invoices, hidden beneficial ownership, unaffordable leverage or essential-living money.
Stop when actual cash use, delivery time or loss exceeds the written limit.
Stop when the central evidence is corrected, withdrawn, contradicted by a stronger source or no longer current.
Do not move a stop limit merely because money, pride or time has already been committed. Sunk cost is not evidence that continuing is rational.
Record every exception to the plan, who approved it and why. Repeated exceptions indicate the plan or control is not working.
A stopped action can still be a successful decision when it prevents a larger loss and preserves the ability to act later.

20. Evidence and legal boundary

This is educational information, not personalised financial, investment, legal, accounting or tax advice.
Investments can fall in value. Businesses can fail. Debt, leverage, illiquidity, tax and legal obligations can create losses greater than the expected benefit.
Rules and thresholds change. Verify the current official position on the date of action.
Never use false invoices, hidden ownership, undeclared income, sham transactions, misleading applications or borrowed essential-living money.
No return, saving, valuation, tax outcome or business result is guaranteed.
