Wealth Calculators and Annual Review Checklist

Transparent formulas for compounding, inflation, fees, debt, runway, break-even and concentration.

MATRIX REPROGRAMMED - DETAILED WEALTH GUIDE

Reader outcome: Build a calculation workbook using documented inputs, downside cases and annual review evidence.
Best for: A reader who wants repeatable calculations and a disciplined annual financial review.
Edition checked: 2026-07-27

Educational information only. No personalised financial, investment, legal or tax advice. No guaranteed outcomes.

CONTENTS

1. Calculator rules

A formula is only as reliable as its inputs and assumptions.
Label every input as known, estimated or scenario.
Use nominal and inflation-adjusted results separately.
Show fees, tax and timing rather than hiding them in one return assumption.
Use downside, base and upside cases without presenting any as guaranteed.

2. Net worth

Net worth = assets at reasonable current value minus liabilities.
Do not count gross business revenue, credit limits or inaccessible expected inheritance as current assets.
Use conservative sale values and include tax or transaction cost where material.
Track liquid net worth separately from total net worth.

3. Savings rate

Savings rate = retained after-tax cash divided by after-tax cash inflow.
Define whether debt principal, pension contributions and business reinvestment are included, then use the definition consistently.
Review the rate alongside quality of life and resilience, not as a moral score.
Increase dependable income and remove large leakage before extreme cuts to essentials.

4. Emergency reserve

Reserve months = accessible emergency cash divided by essential monthly expenditure.
Adjust target for income stability, dependants, insurance, health, business ownership and access to support.
Do not count volatile investments or unused credit as equivalent cash.
Set replenishment rules after use.

5. Compounding

Future value depends on starting amount, contribution timing, return, time and fees.
Constant annual return is an educational simplification; real returns are uneven.
Test lower return, missed contributions and delayed start.
Separate investment growth from contributions to understand the real driver.

6. Inflation-adjusted value

Real value approximates nominal value divided by cumulative inflation.
Use a scenario range rather than assuming one permanent inflation rate.
Different household spending patterns can experience different effective inflation.
A higher nominal return does not guarantee a higher risk-adjusted real outcome.

7. Fee drag

Total annual cost includes product, platform, advice, trading, spread, FX and

7. Fee drag (continued)

performance fees.
Compare portfolios using the same gross-return assumption to isolate cost.
A fee can be justified only by suitable value, service or risk management - not by past marketing claims.
Record costs in currency and percentage terms.

8. Debt payoff

Amortisation depends on balance, rate, payment, fees and compounding frequency.
If payment does not exceed interest and charges, the balance may not decline.
Compare avalanche, snowball and refinancing using behaviour and total cost.
Check early-repayment charges and lost protections before changing loans.

9. Business break-even

Contribution per unit = selling price minus variable cost.
Break-even units = fixed costs divided by contribution per unit.
Include owner labour, returns, payment fees, defects and tax reserves in decision analysis.
Cash break-even can differ from accounting break-even because of payment timing, inventory and debt.

10. Cash runway

Runway months = available operating cash divided by conservative monthly net cash outflow.
Exclude restricted cash, tax money and customer deposits that must fund delivery.
Model slower collection and lower sales.
Set action thresholds before runway becomes critical.

11. Concentration

Largest exposure percentage should be calculated for employer income, customers, assets, sectors, property, bank and currency.
Look through funds where a small number of holdings dominate.
Include future income and pension exposure in the same economic system.
Set limits based on ruin risk and liquidity, not a generic number.

12. Annual review checklist

[ ] Net worth and liquid net worth updated.
[ ] Savings rate and emergency reserve calculated.
[ ] Debt rates and payoff dates updated.
[ ] Portfolio allocation, concentration and fees measured.
[ ] Investment policy reviewed.
[ ] Insurance and beneficiaries reviewed.
[ ] Business margin, break-even and runway updated.

12. Annual review checklist (continued)

[ ] Tax records and allowances reviewed.
[ ] Estate and access records reviewed.
[ ] One-year goals and automatic contributions set.
[ ] Professional advice questions prepared.
[ ] Next review scheduled.

13. How to use this guide

Purpose: Build a calculation workbook using documented inputs, downside cases and annual review evidence.
Best reader: A reader who wants repeatable calculations and a disciplined annual financial review.
Read the guide once without taking action. On the second pass, complete the checklists and write down the evidence supporting each decision.
Replace every example number with your own verified amount, date, fee, tax treatment, contract term or source document.
Do not treat a checklist tick as proof. Keep copies of the underlying statements, quotations, filings, contracts and calculations.
For major decisions, use this guide to prepare better questions for a regulated adviser, accountant, lawyer, lender or insurer.

14. Evidence standard

Tier 1: law, regulator, tax authority, court, audited accounts, official product document or signed contract.
Tier 2: recognised institutional research that states its methodology, date and limitations.
Tier 3: reputable reporting used to identify questions, not to replace primary evidence.
Tier 4: marketing, social posts, testimonials, screenshots and anonymous claims. Treat these as unverified leads.
Write the source date beside every changing figure. A correct figure without a date can become misleading.
Separate facts, estimates, assumptions and scenarios. Never allow a scenario to be presented as a forecast or guarantee.
A company, fund, adviser, trust, structure, transaction or association is not proof of misconduct.

15. Decision record worksheet

[ ] State the decision in one sentence.
[ ] State the desired result and deadline.
[ ] List the three strongest pieces of supporting evidence.
[ ] List the three strongest reasons the decision may fail.
[ ] Record the maximum acceptable loss of money, time and flexibility.

15. Decision record worksheet (continued)

[ ] Record the smallest reversible test.
[ ] Name the person responsible for checking legal, tax or regulatory consequences.
[ ] Set the next review date and the evidence that would cause you to stop.

16. Professional advice triggers

Seek regulated investment advice when product suitability, risk capacity, pensions, insurance or a large portfolio decision is unclear.
Seek tax advice before changing residence, extracting company cash, transferring assets, using trusts, gifting substantial sums or entering cross-border arrangements.
Seek legal advice before signing guarantees, shareholder agreements, acquisition contracts, complex leases, loan security or beneficiary arrangements.
Seek accounting advice when turnover, VAT, payroll, inventory, multiple activities or company-group transactions become material.
Use a defined written question. Paying for broad reassurance without documents or calculations rarely produces a useful answer.

17. Subject focus map

Use the following subject anchors as named checkpoints. For each checkpoint, record the fact, source, date, assumption, decision and next review date.
COMPOUNDING: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.
FEE DRAG: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.
BREAK-EVEN: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.
ANNUAL REVIEW: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.
Do not mark a checkpoint complete because an action was taken. Mark it complete only when the result and supporting evidence have been recorded.
Where a checkpoint depends on another person, institution, platform or contract, record that dependency and a fallback route.
Rank checkpoints by potential harm if ignored, not by how interesting or easy they appear.
At the end of each review, choose one checkpoint to advance and one risk to reduce before adding a new objective.

18. Worked decision case

Write a real decision from your own situation at the top of a blank page. Examples include changing work, launching an offer, choosing an account, buying an asset, restructuring a business or rejecting a proposal.
Baseline: state the current cash, income, liabilities, commitments, ownership, legal

18. Worked decision case (continued)

position and time available. Use documents rather than memory where possible.
Desired result: describe the measurable outcome, deadline and reason. Remove vague language such as more, better, passive, safe or guaranteed.
Options: include the proposed action, a smaller reversible test, a diversified alternative, delaying the action and doing nothing.
Evidence: attach at least three independent sources. Identify which evidence is official, contractual, audited, estimated, promotional or missing.
Economics: show setup cost, recurring cost, cash timing, fees, tax reserve, downside loss, opportunity cost and the point at which the decision becomes worthwhile.
Risk: identify concentration, liquidity, legal, operational, fraud, health, relationship and behavioural risks. Name the risk that could create irreversible harm.
Professional review: write the exact question that requires an accountant, lawyer, regulated adviser, lender, insurer or technical specialist.
Decision: state proceed, test, delay or reject. Record the maximum commitment and the evidence required before any further commitment.
Review: set a dated checkpoint. Write the result that would confirm the decision, the result that would require adjustment and the result that would trigger an immediate stop.

19. 90-day implementation workbook

Week 1 - Establish the baseline. Reconcile the relevant accounts, contracts, statements, fees, tax records, responsibilities and deadlines.
Week 2 - Define the result. Choose one measurable outcome and remove actions that do not directly support it or protect an essential risk.
Week 3 - Gather primary evidence. Use official registers, filings, signed terms, current quotations and dated institutional data.
Week 4 - Compare alternatives. Include a lower-cost option, a lower-risk option, a reversible test and the option to wait.
Week 5 - Model the economics. Build downside, base and upside cases while treating every uncertain input as an assumption.
Week 6 - Verify identity and authority. Confirm who owns, controls, advises, holds money, signs contracts and bears liability.
Week 7 - Run the smallest useful test. Limit money, time and legal commitment while collecting evidence about real demand or performance.
Week 8 - Reconcile actual results. Compare promised, expected and actual cost, time, cash flow, quality, risk and customer or counterparty behaviour.
Week 9 - Repair the constraint. Improve the single factor currently limiting income, retention, safety, liquidity, delivery or evidence quality.
Week 10 - Install controls. Add calendar reminders, approval limits, account separation, written procedures, backups and review ownership.
Week 11 - Decide whether to scale. Increase commitment only when the test produced measurable value and the downside remains affordable.

19. 90-day implementation workbook (continued)

Week 12 - Complete the evidence file. Store the decision record, sources, calculations, contracts, results, lessons and next review date.
Day 90 - Write a one-page conclusion: what was established, what remains uncertain, what changed, what will continue and what will stop.

20. Review, escalation and stop rules

Review monthly when the decision affects recurring cash, debt, customer commitments, investment contributions or essential protection.
Review immediately after a material legal change, tax notice, contract change, security incident, missed payment, large loss, health event or relationship change.
Escalate to a qualified professional when the facts cross jurisdictions, involve regulated products, create personal guarantees, affect beneficiaries or cannot be reversed cheaply.
Pause when required documents are missing, identities cannot be independently verified, costs are unclear or the counterparty resists reasonable due diligence.
Stop when the action requires deception, undeclared income, false invoices, hidden beneficial ownership, unaffordable leverage or essential-living money.
Stop when actual cash use, delivery time or loss exceeds the written limit.
Stop when the central evidence is corrected, withdrawn, contradicted by a stronger source or no longer current.
Do not move a stop limit merely because money, pride or time has already been committed. Sunk cost is not evidence that continuing is rational.
Record every exception to the plan, who approved it and why. Repeated exceptions indicate the plan or control is not working.
A stopped action can still be a successful decision when it prevents a larger loss and preserves the ability to act later.

21. Evidence and legal boundary

This is educational information, not personalised financial, investment, legal, accounting or tax advice.
Investments can fall in value. Businesses can fail. Debt, leverage, illiquidity, tax and legal obligations can create losses greater than the expected benefit.
Rules and thresholds change. Verify the current official position on the date of action.
Never use false invoices, hidden ownership, undeclared income, sham transactions, misleading applications or borrowed essential-living money.
No return, saving, valuation, tax outcome or business result is guaranteed.
