20. Official research routes

1. The zero-capital rule

When investable capital is zero, the immediate objective is not a speculative return.

It is dependable positive monthly cash flow.

Protect housing, food, energy, transport, health, essential insurance and minimum debt obligations before optional spending.

Do not buy courses, equipment, stock or advertising until a real customer problem and a credible payment route have been tested.

Use existing skills, tools, relationships and local demand before creating a capital-heavy plan.

Measure progress in conversations, offers, paid tests, delivery quality and retained cash - not followers or vague interest.

2. Days 1-3 - Calculate the survival number

1. List every source of cash available today and its access restrictions.
 2. List essential monthly costs and the date each leaves the account.
 3. List every debt balance, interest rate, minimum payment and arrears consequence.
 4. Calculate the survival number: essential monthly costs plus minimum contractual payments.
 5. Calculate the cash gap: survival number minus dependable after-tax income.
- [] Cancel, pause or renegotiate one cost that does not protect health, security

or earning ability.

☐ Create separate spaces for bills, tax, operating cash and emergency savings.

3. Days 4-6 - Build the skill and asset inventory

List work completed successfully, problems solved, equipment owned, licences held, languages spoken and local access advantages.

Ask: what result can be delivered within seven days without buying material stock?

Rank possible offers by urgent demand, proof of ability, delivery speed, gross margin and legal simplicity.

Reject offers requiring regulated advice, unsafe work, unlicensed activity or hidden upfront costs.

☐ Choose one primary offer and one backup offer.

☐ Write one proof statement using a real result, qualification, work sample or demonstration.

4. Day 7 - Write the first offer

Offer formula: I help [specific buyer] achieve [specific result] within [time] for [clear price or pricing method].

Define what is included, what is excluded, delivery date, payment timing, cancellation rule and customer responsibility.

Create a small paid test that is valuable on its own and does not depend on future upselling.

Price from labour, materials, travel, platform fees, tax reserve, rework risk and target contribution - not from fear.

[] A stranger can understand the offer in 20 seconds.

[] The buyer can say yes without signing a complex long-term commitment.

5. Week 2 - The first 50 conversations

Build a named list of 50 buyers, employers, partners or referrers who genuinely fit the offer.

Contact ten per working day using a short personal message tied to a visible need.

Outreach structure: observation, relevant result, small offer, clear question, easy refusal.

Track sent, opened, replied, conversation, quote, sale and reason lost.

Follow up twice with new information. Do not repeatedly pressure a silent prospect.

[] Complete at least five real discovery conversations.

[] Ask what the buyer currently does, what it costs and what would make change worthwhile.

6. The first paid test

Collect the agreed payment or deposit through a documented method before committing significant delivery cost.

Confirm scope in writing and record changes before doing extra work.

Deliver exactly what was promised, then record actual hours, expenses, defects and customer questions.

Ask for permission to use a factual testimonial or anonymised result.

Request one introduction to a similar buyer only after successful delivery.

If the test loses money, identify whether the problem was price, scope, process, demand or customer selection.

7. Week 3 - Turn work into a system

Create a delivery checklist that another competent person could follow.

Create reusable quotation, invoice, onboarding, reminder and completion templates.

Identify the constraint: leads, conversion, delivery capacity, quality, collection or margin.

Improve only the current constraint rather than adding unrelated services.

Set a maximum number of simultaneous jobs to protect quality and cash.

[] Record one standard operating procedure.

[] Remove one task that adds cost but no customer value or compliance protection.

8. Week 4 - Create the first reserve

Separate tax and social-charge money immediately; it is not spendable profit.

Direct the first retained surplus toward a starter reserve before speculative investing.

A practical first target is the smaller of one essential monthly bill cycle or a clearly defined emergency amount.

Attack expensive debt where the guaranteed interest saving exceeds realistic low-risk alternatives, subject to contract terms.

Only begin investing after essential bills, urgent arrears and basic liquidity are protected.

[] Set an automatic transfer on income day.

[] Write a rule for when the reserve may be used and how it will be rebuilt.

9. 30-day scorecard

Cash map completed: yes/no.

Costs cancelled or renegotiated: number and monthly saving.

Named prospects contacted: target 50 or more.

Discovery conversations: target 5 or more.

Written offers sent: target 3 or more.

Paid tests completed: target at least 1.

Actual contribution after direct costs: record the amount.

Tax reserve created: yes/no.

Emergency reserve balance: record the amount.

Next 30-day constraint: choose one.

10. Stop and change direction when

The activity is unlawful, unsafe, uninsured where insurance is required, or outside your competence.

Customers consistently value the result below the true delivery cost.

The offer depends on deception, spam, false scarcity or unprovable claims.

Payment delays make the cash cycle impossible to finance safely.

After a defined number of qualified conversations, the same objection shows the problem is weak or badly targeted.

11. How to use this guide

Purpose: Finish 30 days with a complete cash map, one tested income offer, a repeatable outreach process and a protected first reserve.

Best reader: A reader with little or no investable capital who needs reliable surplus cash before investing.

Read the guide once without taking action. On the second pass, complete the checklists

and write down the evidence supporting each decision.

Replace every example number with your own verified amount, date, fee, tax treatment, contract term or source document.

Do not treat a checklist tick as proof. Keep copies of the underlying statements, quotations, filings, contracts and calculations.

For major decisions, use this guide to prepare better questions for a regulated adviser, accountant, lawyer, lender or insurer.

12. Evidence standard

Tier 1: law, regulator, tax authority, court, audited accounts, official product document or signed contract.

Tier 2: recognised institutional research that states its methodology, date and limitations.

Tier 3: reputable reporting used to identify questions, not to replace primary evidence.

Tier 4: marketing, social posts, testimonials, screenshots and anonymous claims. Treat these as unverified leads.

Write the source date beside every changing figure. A correct figure without a date can become misleading.

Separate facts, estimates, assumptions and scenarios. Never allow a scenario to be presented as a forecast or guarantee.

A company, fund, adviser, trust, structure, transaction or association is not proof of

misconduct.

13. Decision record worksheet

- ☐ State the decision in one sentence.
- ☐ State the desired result and deadline.
- ☐ List the three strongest pieces of supporting evidence.
- ☐ List the three strongest reasons the decision may fail.
- ☐ Record the maximum acceptable loss of money, time and flexibility.
- ☐ Record the smallest reversible test.
- ☐ Name the person responsible for checking legal, tax or regulatory consequences.
- ☐ Set the next review date and the evidence that would cause you to stop.

14. Professional advice triggers

Seek regulated investment advice when product suitability, risk capacity, pensions, insurance or a large portfolio decision is unclear.

Seek tax advice before changing residence, extracting company cash, transferring assets, using trusts, gifting substantial sums or entering cross-border arrangements.

Seek legal advice before signing guarantees, shareholder agreements, acquisition contracts, complex leases, loan security or beneficiary arrangements.

Seek accounting advice when turnover, VAT, payroll, inventory, multiple activities or company-group transactions become material.

Use a defined written question. Paying for broad reassurance without documents or calculations rarely produces a useful answer.

15. Subject focus map

Use the following subject anchors as named checkpoints. For each checkpoint, record the fact, source, date, assumption, decision and next review date.

DAY 1: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

FIRST PAID TEST: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

SURVIVAL NUMBER: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

30-DAY SCORECARD: define what this checkpoint means for this guide, what evidence supports it, and what result would cause you to change course.

Do not mark a checkpoint complete because an action was taken. Mark it complete only when the result and supporting evidence have been recorded.

Where a checkpoint depends on another person, institution, platform or contract, record that dependency and a fallback route.

Rank checkpoints by potential harm if ignored, not by how interesting or easy they appear.

At the end of each review, choose one checkpoint to advance and one risk to reduce before adding a new objective.

16. Worked decision case

Write a real decision from your own situation at the top of a blank page. Examples include changing work, launching an offer, choosing an account, buying an asset, restructuring a business or rejecting a proposal.

Baseline: state the current cash, income, liabilities, commitments, ownership, legal position and time available. Use documents rather than memory where possible.

Desired result: describe the measurable outcome, deadline and reason. Remove vague language such as more, better, passive, safe or guaranteed.

Options: include the proposed action, a smaller reversible test, a diversified alternative, delaying the action and doing nothing.

Evidence: attach at least three independent sources. Identify which evidence is official, contractual, audited, estimated, promotional or missing.

Economics: show setup cost, recurring cost, cash timing, fees, tax reserve, downside loss, opportunity cost and the point at which the decision becomes worthwhile.

Risk: identify concentration, liquidity, legal, operational, fraud, health, relationship and behavioural risks. Name the risk that could create irreversible harm.

Professional review: write the exact question that requires an accountant, lawyer, regulated adviser, lender, insurer or technical specialist.

Decision: state proceed, test, delay or reject. Record the maximum commitment and the

evidence required before any further commitment.

Review: set a dated checkpoint. Write the result that would confirm the decision, the result that would require adjustment and the result that would trigger an immediate stop.

17. 90-day implementation workbook

Week 1 - Establish the baseline. Reconcile the relevant accounts, contracts, statements, fees, tax records, responsibilities and deadlines.

Week 2 - Define the result. Choose one measurable outcome and remove actions that do not directly support it or protect an essential risk.

Week 3 - Gather primary evidence. Use official registers, filings, signed terms, current quotations and dated institutional data.

Week 4 - Compare alternatives. Include a lower-cost option, a lower-risk option, a reversible test and the option to wait.

Week 5 - Model the economics. Build downside, base and upside cases while treating every uncertain input as an assumption.

Week 6 - Verify identity and authority. Confirm who owns, controls, advises, holds money, signs contracts and bears liability.

Week 7 - Run the smallest useful test. Limit money, time and legal commitment while collecting evidence about real demand or performance.

Week 8 - Reconcile actual results. Compare promised, expected and actual cost, time, cash flow, quality, risk and customer or counterparty behaviour.

Week 9 - Repair the constraint. Improve the single factor currently limiting income, retention, safety, liquidity, delivery or evidence quality.

Week 10 - Install controls. Add calendar reminders, approval limits, account separation, written procedures, backups and review ownership.

Week 11 - Decide whether to scale. Increase commitment only when the test produced measurable value and the downside remains affordable.

Week 12 - Complete the evidence file. Store the decision record, sources, calculations, contracts, results, lessons and next review date.

Day 90 - Write a one-page conclusion: what was established, what remains uncertain, what changed, what will continue and what will stop.

18. Review, escalation and stop rules

Review monthly when the decision affects recurring cash, debt, customer commitments, investment contributions or essential protection.

Review immediately after a material legal change, tax notice, contract change, security incident, missed payment, large loss, health event or relationship change.

Escalate to a qualified professional when the facts cross jurisdictions, involve regulated products, create personal guarantees, affect beneficiaries or cannot be reversed cheaply.

Pause when required documents are missing, identities cannot be independently verified, costs are unclear or the counterparty resists reasonable due diligence.

Stop when the action requires deception, undeclared income, false invoices, hidden

beneficial ownership, unaffordable leverage or essential-living money.

Stop when actual cash use, delivery time or loss exceeds the written limit.

Stop when the central evidence is corrected, withdrawn, contradicted by a stronger source or no longer current.

Do not move a stop limit merely because money, pride or time has already been committed. Sunk cost is not evidence that continuing is rational.

Record every exception to the plan, who approved it and why. Repeated exceptions indicate the plan or control is not working.

A stopped action can still be a successful decision when it prevents a larger loss and preserves the ability to act later.

19. Evidence and legal boundary

This is educational information, not personalised financial, investment, legal, accounting or tax advice.

Investments can fall in value. Businesses can fail. Debt, leverage, illiquidity, tax and legal obligations can create losses greater than the expected benefit.

Rules and thresholds change. Verify the current official position on the date of action.

Never use false invoices, hidden ownership, undeclared income, sham transactions, misleading applications or borrowed essential-living money.

No return, saving, valuation, tax outcome or business result is guaranteed.
