

Opportunity Radar - Research Before You Invest

MATRIX REPROGRAMMED | MAKING MONEY

RESEARCH FRAMEWORK

Test growth, valuation, income, volatility, liquidity, debt, inflation, regulation, technology, geopolitics and time horizon separately.

AI compute and data centres: Broad technology, semiconductor, infrastructure and power-system research rather than chasing one headline stock.

Electricity grids, storage and transformers: Regulated utilities, diversified infrastructure funds, equipment supply chains and skills.

Energy security, nuclear and domestic supply: Diversified energy and infrastructure research; specialist exposure requires high risk tolerance.

Cybersecurity and identity protection: Skills, services, diversified funds and profitable operators with recurring revenue.

Robotics and industrial automation: Industrial suppliers, software, sensors, logistics and specialist skills.

Water, climate adaptation and resilient infrastructure: Utilities, engineering, equipment, infrastructure funds and local service businesses.

Healthcare, ageing and biotechnology: Diversified healthcare exposure and skills rather than binary clinical bets.

Defence, logistics and supply-chain resilience: Public contractors, industrial suppliers and specialist employment.

EVIDENCE BOUNDARY
